## PAPER 3

PRACTICAL
TIME: 2 HOURS

## INSTRUCTIONS:

- Answer ALL questions in the spaces provided.
- You are NOT allowed to start working with the apparatus for the first 15 minutes of the 2 - hours. Allowed for this paper. This time will enable you read through the question paper and make sure you have all the chemicals and apparatus required.
- Mathematical tables and electronic calculators may be used.
- All working must be clearly shown where necessary.

FOR EXAMINERS USE ONLY

| Question | Maximum score | Candidate's score |
| :---: | :---: | :---: |
| 1 | 22 |  |
| 2 | 12 |  |
| 3 | 6 |  |
| TOTAL SCORE | 40 |  |

1. You are provided with:

- Solution P of Potassium mâfiganate (VII).
- 0.05 M solution Q of Qxálic acid.
- Solution R containing 4.9 g of ammonium iron (II) Sulphate, $\left(\mathrm{NH}_{4}\right)_{2} \mathrm{SO}_{4} \cdot \mathrm{FeSO}_{4} \cdot 6 \mathrm{H}_{2} \mathrm{O}$, in $250 \mathrm{~cm}^{3}$ of water.
You are required fo:
i) Determine the rate of reaction between oxalic acid and Potassium manganate (VII). ii) 5 tandardize the solution $P$.

PROCEDURE I:
Using a measuring cylinder, place $1 \mathrm{~cm}^{3}$ of solution $P$ into each of the five (5) test-tubes in a rack. Clean the measuring cylinder and use it to place $19 \mathrm{~cm}^{3}$ of solution Q into a boiling tube. Prepare a water bath by placing about $200 \mathrm{~cm}^{3}$ of water into a beaker and start to heat. Place a thermometer into solution Q and place it in the warm water until it attains a temperature of $40^{\circ} \mathrm{C}$. Remove the boiling tube from the water bath and place it in the test-tube rack. Add the first portion of solution P immediately and at the same time start a stop watch. Record the time taken for solution P to be decolourised in table I below. Repeat the procedure at temperatures of $50^{\circ} \mathrm{C}, 60^{\circ} \mathrm{C}, 70^{\circ} \mathrm{C}$ and $80^{\circ} \mathrm{C}$ to complete the table.

| Temperature of solution Q $\left({ }^{\circ} \mathrm{C}\right)$ | 40 | 50 | 60 | 70 | 80 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Time taken for decolourisation (tsecs) |  |  |  |  |  |
| $1 / \mathrm{t} \mathrm{sec}^{-1}$ |  |  |  |  |  |

i) Plot a graph of $1 / \mathrm{t}$ against temperature ( X -axis).

## PROCEDURE II

Fill a burette with solution P. Pipette $25 \mathrm{~cm}^{3}$ of solution R into a conical flask and titrate the solution P against solution R until a permanent pink colour just appears. Record your results in table II below and repeat the procedure to fill the table.

|  | I | II | III |

2. You are providea with solid B. Carry out the tests below and record your observations and inferences in the table belows
i) Placedralfo Spaluta full of solid B in a clean dry test-tube and heat gently then strongly.

ii) Place the remaining solid B in a boiling tube and add about $5 \mathrm{~cm}^{3}$ of distilled water and shake well.

Divide the resulting mixture into four portions for the tests below.
