1. Name two factors that determine energy requirements in a man. 

………………………………………………………………………………………………………….
………………………………………………………………………………………………………….
………………………………………………………………………………………………………….

2. Define the term pollination.

………………………………………………………………………………………………………….
………………………………………………………………………………………………………….
………………………………………………………………………………………………………….
………………………………………………………………………………………………………….
………………………………………………………………………………………………………….

3. An organism was found to have the following characteristics.
   - Jointed appendages.
   - Body with exoskeleton.
   - Lays eggs which later hatch to young ones.
   - Has compound eyes.
   - Body segmented.
   - Dorso.ventrally compressed.

a) Name the phylum into which the organism belongs. 
   (1 Mark)
   …………………………………………………………………………………………………………

b) To which class does the organism belong? 
   (1 Mark)
   …………………………………………………………………………………………………………

c) Give an example of an organism that belongs to class named in (b) above. 
   (1 Mark)
   …………………………………………………………………………………………………………

4. Give the function of each of the following in reproduction.

i) Ovary. 
   (2 Marks)
   …………………………………………………………………………………………………………
………………………………………………………………………………………………………

ii) Testes. 
   (2 Marks)
   …………………………………………………………………………………………………………
………………………………………………………………………………………………………

5. List three pieces of evidence of evolution. 
   (3 Marks)
   …………………………………………………………………………………………………………
………………………………………………………………………………………………………
………………………………………………………………………………………………………
6. In an experiment a seedling was placed in horizontal position and left for several days. Draw the appearance of the seedling after 4 days. (2 Marks)

7. State the importance of roughage in digestion. (2 Marks)

8. What is a reflex arc? (1 Mark)

9. State three functions of water in a germinating seed. (3 Marks)

10. State two functions of mucus secreted by goblet cells along the walls of alimentary canal. (2 Marks)

11. State the role played by bark in plants. (3 Marks)
12. State **three** events that take place in a flower after fertilization.  
…………………………………………………………………………………………………………  
…………………………………………………………………………………………………………  
…………………………………………………………………………………………………………  
…………………………………………………………………………………………………………  

13. a) Name the hormone that controls osmotic pressure of body fluids.  
…………………………………………………………………………………………………………  
…………………………………………………………………………………………………………  

b) State **two** symptoms of diuresis.  
…………………………………………………………………………………………………………  
…………………………………………………………………………………………………………  

14. What is the function of each of the following parts of a microscope?  
   a) Condensor.  
   (1 Mark)  
………………………………………………………………………………………………………  
………………………………………………………………………………………………………  

   b) Mirror.  
   (1 Mark)  
………………………………………………………………………………………………………  
………………………………………………………………………………………………………  

15. The figure below shows a stage in cell division.  

![Cell Division Diagram]  

   a) Name the type of cell division shown by the diagram.  
   (1 Mark)  
…………………………………………………………………………………………………………  

   b) i) Name the stage of the cell division that exhibits the process shown.  
   (1 Mark)  
…………………………………………………………………………………………………………  

   ii) State the significance of the process name in b(i) above.  
   (1 Mark)  
…………………………………………………………………………………………………………
16. State **three** adaptations of thoracic vertebra to function.  
(3 Marks)

17. What are the effects of releasing raw sewage to water?  
(3 Marks)

18. What are sex-linked genes?  
(1 Mark)

19. Study the figure below of human eye.

![Human Eye Diagram](image)

a) Name parts P and Q.  
(2 Marks)

P ..............................................

Q ..............................................

b) State the modification of part Q to function.  
(1 Mark)

..............................................................

..............................................................

c) What is the function of part S?  
(1 Mark)

..............................................................

..............................................................
20. a) Name the process by which nephrons remove wastes and other materials from blood into Bowman’s capsule. (1 Mark)

b) State two modifications of nephron’s in fresh water fish. (2 Marks)

21. State three functions of the liver which contribute towards homeostasis. (3 Marks)

22. State the functional differences between arteries and veins. (2 Marks)

23. Distinguish between active and passive immunity. (2 Marks)

24. Name two types of hormones in insects which regulate growth and development. (2 Marks)

25. Study the diagram below.

a) i) Name the agent of dispersal. (1 Mark)
ii) Give a reason for your answer in a(i) above. (1 Mark)

………………………………………………………………………………………………………
………………………………………………………………………………………………………
………………………………………………………………………………………………………
………………………………………………………………………………………………………

b) State one importance of fruit and seed dispersal. (1 Mark)

………………………………………………………………………………………………………
………………………………………………………………………………………………………

26. Diagram below show changes in plant cells when put in solution X.

a) Identify the nature of solution X. (1 Mark)

………………………………………………………………………………………………………

b) Account for change shown. (3 Marks)

………………………………………………………………………………………………………
………………………………………………………………………………………………………
………………………………………………………………………………………………………
………………………………………………………………………………………………………
………………………………………………………………………………………………………

27. Name the stages of photosynthesis and identify their site in Chloroplast. (4 Marks)

<table>
<thead>
<tr>
<th>Stage</th>
<th>Site</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
28. Explain why food is stored in insoluble form in cells of living things. (2 Marks)
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................

29. When body temperature increases above normal; blood arterioles in skin vasodilate. Give a reason. (2 Marks)
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................

30. Name the types of joints found at the articulation points in each of the following pairs.
   i) Pelvic girdle and femur. (1 Mark)
      ........................................................................................................................................
      ........................................................................................................................................
   ii) Humerus and ulna. (1 Mark)
      ........................................................................................................................................
      ........................................................................................................................................

31. State two adaptations of guard cells. (2 Marks)
........................................................................................................................................
........................................................................................................................................
