MUMIAS DISTRICT JOINT EVALUATION EXAM

Kenya Certificate of Secondary Education (K.C.S.E.)

Biology
Paper 2

INSTRUCTIONS TO CANDIDATES:

- Write your name and index number in the spaces provided.
- Answer all the questions in Section A in the spaces provided.
- In section B answer questions 6 (compulsory) and either question 7 or 8 in the spaces provided.

For Examiner’s Use Only:

This paper consists of 8 printed pages. Candidates should check to ascertain that all papers are printed as indicated and that no questions are missing.

© MUMIAS– 2011
Form Four
Biology 231/2
SECTION A

1. In an Experiment, Drosophila (fruit flies) with long wings were crossed with those having vestigial (short) wings.

All the offspring (F1 generation) from this cross had long wings.

Using letter \( N \) to denote the gene for wing size:-

(a) Give the genotypes of the parents. (2mks)

(b) Work out the phenotypic ratio of the F2 generation if the F1 generation was selfed. (5mks)

(c) The gene for eye colour in Drosophila is located on the x-chromosome. What name is given to such genes? (1mk)

2. A class set up the experiment below to investigate a certain biological process.

![Diagram of the experiment with oil, boiled, cooled glucose solution, yeast, and lime water]
(a) Name the process under investigation. (1mk)

(b) Why was the glucose solution boiled and then coiled before the yeast was added? (2mks)

(c) (i) What is the role of yeast in the experiment? (2mks)

(ii) Name two products in the experiment. (2mks)

3. A group of students was investigating the number of crayfish in a shallow pond using the capture-recapture method. They caught 50 crayfish, marked them with a dab of white paint on the cephalothorax, and then released them back into the same pond. After three days they collected another 50 crayfish from the pond, and of these 3 bore the white paint mark.

(a) Using this data, calculate the population of the crayfish in this pond. (3mks)

(b) State any two assumptions that were made in this method of estimating crayfish population in the pond. (2mks)

(c) Suggest another method that could have been used to determine the population size of the crayfish. (1mk)

(d) Define the term eutrophication. (3mks)
4. Study the diagram below; and answer the following questions.

(a) Name the muscles labeled A and B. (2mks)
   A…………………………………………………..
   B………………………………………………..

(b) What happens to each muscle as the arm is straightened? (2mks)

(c) Name the joint at C. (1mk)

(d) (i) Some herbaceous stems have very little strengthening tissue yet still remain upright. Explain (2mks)

   (ii) Name the strengthening material in scherenchyma tissue. (1mk)

5. The figure below shows the effect of temperature on an enzyme-catalyzed reaction.
(a) Account for the shape of the graph:

(i) Between points A and B.

(ii) Beyond C.

(b) What is point X?

(c) Name two other factors that affect an enzyme-catalyzed reaction.

(d) State the enzyme found in living tissues that breaks down hydrogen peroxide.

SECTION B

Answer questions 6 and either question 7 or 8 in the spaces provided after question 8.

6. The table below shows how the quantities of sweat and urine vary with external temperature.

<table>
<thead>
<tr>
<th>External temperature</th>
<th>0</th>
<th>5</th>
<th>10</th>
<th>15</th>
<th>20</th>
<th>25</th>
<th>30</th>
<th>35</th>
</tr>
</thead>
<tbody>
<tr>
<td>Urine cm³/h</td>
<td>100</td>
<td>90</td>
<td>80</td>
<td>70</td>
<td>60</td>
<td>50</td>
<td>40</td>
<td>30</td>
</tr>
<tr>
<td>Sweat cm³/h</td>
<td>5</td>
<td>6</td>
<td>10</td>
<td>15</td>
<td>30</td>
<td>60</td>
<td>120</td>
<td>200</td>
</tr>
</tbody>
</table>

(a) Using the same axes, draw graphs of quantities of urine and sweat produced against the external temperature.
(b) At what temperature are the amounts of sweat and urine produced equal? (1mk)

………………………………………………………………………………………………………………

(c) Account for the amount of sweat produced as the temperature rises. (3mks)

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

(d) Explain the observation made on the amount of urine produced as the temperature rises. (4mks)

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

(e) Explain how the following help in temperature regulation when it's cold:

(i) Hair (3mks)

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

(ii) Blood vessels (3mks)

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

7. How is the ear adapted to its function? (20mks)

8. Discuss the various phases of growth. (20mks)

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………

………………………………………………………………………………………………………………
