231/1
BIOLOGY PAPER ONE (THEORY)
FORM FOUR
MARCH/APRIL 2013
TIME: 2 HOURS.

BARINGO NORTH TRIAL EXAMINATIONS- 2013
Kenya Certificate of Secondary Education (K.C.S.E.)
FORM FOUR BIOLOGY PAPER ONE.

INSTRUCTIONS TO CANDIDATES
➢ Write your details in the spaces provided
➢ Answer all the questions in the spaces provided.

FOR EXAMINERS USE ONLY

CANDIDATES TOTAL

This paper consists of 8 printed pages.
Candidates should check the question paper to ascertain that all the pages are printed as indicated and that no question is missing.
1. What is biology? (1 mark)

2. Give two skills gained by a student learning Biology. (2 marks)

3. a) Name the unit of classification that has the least organisms. (1 mark)

3. b) State the application of Binomial nomenclature in naming organisms. (1 mark)

4. What is the importance of using a hand lens in classification of organisms (1 mark)

5. Give the function of each of the following parts if a light microscope
   i) Revolving nose piece. (1 mark)

   ii) Condenser. (1 mark)

6. The following is a drawing of a cell structure.

   i) Identify the cell structure. (1 mark)

   ii) Give the function of the part labelled R. (1 mark)

7. Which organelle would be abundant in a:
   i) Sperm cell. (1 mark)

   ii) Palisade cell. (1 mark)
8. Distinguish between diffusion and active transport. (2 marks)

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

9. Give two importance of nutrition in living organisms. (2 marks)

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

10. Name the organism that exhibits the following mode of feeding;
    i) Herbivorous (1 mark)

______________________________________________________________________________

______________________________________________________________________________

ii) Carnivorous (1 mark)

______________________________________________________________________________

11. Below are diagrams of mammalian teeth

![Diagrams of mammalian teeth](image)

Giving a reason identify each type of tooth

X____________________________________________________________ (1 mark)

Reason:________________________________________________________________________

______________________________________________________________________ (1 mark)

Y____________________________________________________________ (1 mark)

Reason_______________________________________________________________

______________________________________________________________________ (1 mark)

12 a) State the importance of each of the following steps when testing for non-reducing sugars:

i) Boiling food sample with dilute hydrochloric acid. (1 mark)

______________________________________________________________________________

______________________________________________________________________________

For More Free KCSE past papers visit www.freekcsepastpapers.com
ii) Adding sodium hydrogen carbonate to a mixture of food sample with dilute Hcl. (1 mark)

b) What causes emulsification in human body (1 mark)

13. Below is a longitudinal section through a dicotyledonous root tip

i) Name the type of cells found in part Q (1 mark)

ii) Give the function of the part labelled P (1 mark)

14. What is the importance of cohesion and adhesion forces in transpiration. (2 marks)

15. How do the following structural adaptations minimize the rate of transpiration?

i) Leaf folding (1 mark)

ii) Thick waxy cuticle (1 mark)

16. State the role of the following in mammalian heart

i) Semilunar valves (1 mark)

ii) Cuspid valves (1 mark)
17. What makes the osmotic pressure of guard cells fall at night. (1 mark)

______________________________________________________________________________

______________________________________________________________________________

18. Where does gaseous exchange take place in plant stems (1 mark)

______________________________________________________________________________

19. Explain the importance of respiratory surfaces being
   i) Thin walled (1 mark)
       _______________________________________________________________________
       _______________________________________________________________________
   b) Moist (1 mark)
       _______________________________________________________________________
       _______________________________________________________________________

20. A land insect died when its abdomen was completely smeared and covered with Vaseline jelly. Explain (2 marks)

______________________________________________________________________________

______________________________________________________________________________

21. a) Suggest two reasons why animals require specialized excretory organs as compared to plants. (2 marks)

______________________________________________________________________________

______________________________________________________________________________

   b) Name the part of the nephron where counter current flow occur. (1 mark)
       _______________________________________________________________________

22. Give the difference between respiration and gaseous exchange. (2 marks)

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

______________________________________________________________________________

23. State the uses of the following plant excretory products:
   i) Quinine (1 mark)
       _______________________________________________________________________

24. Name the type of asexual reproduction exhibited by members of monera kingdom (1 mark)

25. Give two conditions necessary for the growth of fungi (2 marks)

26. a) State three (3) classes of the subdivision Gymnospermatophyta. (3 marks)

b) Give one structural difference between a monocotyledonous and a dicotyledonous leaf. (1 mark)

c) While walking through the school playground, a student came across an organism with the following descriptions:
- A pair of antennae
- Two pairs of wings
- Segmented abdomen
- Three pairs of legs

i) Give the phylum and the class that the organism belong.
- Phylum
- Class  (2 marks)

ii) Name the three body parts in the organism. (3 marks)
27.  
a) What instrument is used to measure humidity.  

______________________________  

(1 mark)  
b) State three requirements for estimation of population size using the quadrat method.  

______________________________  

______________________________  

______________________________  

______________________________  

______________________________  

______________________________  

(3 marks)  
c) Give two effects of radioactive emissions  

______________________________  

(2 marks)  

28.  
a) Mention the causal organism of:-  

i) Cholera  

______________________________  

(1 mark)  

ii) Malaria  

______________________________  

(1 mark)  
b) Give two symptoms of typhoid  

______________________________  

______________________________  

______________________________  

______________________________  

______________________________  

______________________________  

______________________________  

(2 marks)  
c) i) What is reproduction?  

______________________________  

______________________________  

______________________________  

______________________________  

(1 mark)  

ii) How is reproduction important to living organisms?  

______________________________  

______________________________  

______________________________  

______________________________  

______________________________  

______________________________  

______________________________  

______________________________  

(2 marks)
29. Below is a diagram of a mature embryo sac

\[ \text{Diagram of a mature embryo sac with labels P and Q.} \]

i) Name the type of cells labelled P \( (1 \text{ mark}) \)
_________________________________________________________________________________

ii) What is the role of the part labelled Q \( (1 \text{ mark}) \)
_________________________________________________________________________________

30. a) What is the role of each of the following hormones in a female human being

i) Luteinising hormone. \( (1 \text{ mark}) \)
_________________________________________________________________________________

ii) Progesterone. \( (1 \text{ mark}) \)
_________________________________________________________________________________

b) Give two internal factors in a seed that affect seed germination. \( (2 \text{ marks}) \)
_________________________________________________________________________________
_________________________________________________________________________________
_________________________________________________________________________________
_________________________________________________________________________________

30. c) Define the first Mendel law of heredity. \( (1 \text{ mark}) \)
_________________________________________________________________________________

30. d) Distinguish between homologous and analogous structures. \( (2 \text{ marks}) \)
_________________________________________________________________________________
_________________________________________________________________________________
_________________________________________________________________________________
