## SECTION1 ( 25 MARKS)

1. What is the reading of the micrometer screw gauge shown in the figure below if has a zero error of -0.04
2. The figure 2 below shows a uniform meter rule pivoted at the 23 cm mark with a mass of 4. 3.6 kg hanging at the o cm mark the system is in equilibrium.

Determine,
i) the weight of the rule
(2MK)
ii) the normal reaction force R at the rule
(1 MK)
3. When a drop of oleic acid of known volume is is dropped on the surface of water in a large trough it spread out to form a large circhifar patch. State one assumption made when the size of the molecule of oleic acid isstimated by determining the area of the patch ( 1 mk )
4. Theforlowing is a graph of force against extension for a spring

On the same axes, sketch a graph of force against extension for a spring double the length, same thickness, same material as the spring above (1MK)
5. It is found that a force of 500 N placed on a nail head cannot drive it into a piece of wood while the same nail is driven into the wood by a hammer if it strikes it with the same force. Explain (2MK)
6. Two parallel forces are acting on a body of mass 0.7 kg as shown in figure 4 below.

7. The figure 6 below shows a rectangular glass block of sides $10 \mathrm{~cm} \times 20 \mathrm{~cm} \times 60 \mathrm{~cm}$ fully immersed in two liquids. One third of its volume is in paraffin while two thirds is under watere.

Given that the density of the block is $1200 \mathrm{Kg} / \mathrm{m}^{3}$, density of paraffin is 800 Kg , and that of water is 1000 Kg , Calculate the tension in the string
8. A passenger was sucked out after the rear door of a cargo plane opened accidentally during flight take off. Explain
(2MK)
9. The figure 7 below shows three identical masses $\mathrm{m}_{1}, \mathrm{~m}_{2}$ and $\mathrm{m}_{3}$ placed on a smooth rotating table.

Figure 7 $\mathrm{m}_{2}$
i. State the factor that determine whether a particular mass slides of the table or not (1MK)
ii.
at 30 revolutions per minute. What is the speed of the body along the circumference ( 3 mk )
10. The set up below shows two test tubes one filled with water while the other with mercury. Some wax is fixed at the bottom of each. A thick copper rod is dipped in both as shown in figure 8 below. A Bunsen burner flame is lit at the centre.

It was observed that the wax on the mercury test-tube falls off first. Give a reason for the observation
11. A tall building has two barometers, one at the ground floor reading 750 mmHg and the other at the top reading 748 mmHg . Dedermmine the height of the building

## SECTIQS B (55MKS)

12.a) Two similar cans are partly filled with equal quantities of paraffin. Each of the cans is coyered with a lid holding a thermometers as shown in figure 8

The cans are placed on a wooden bench at the same distance from a radiant heat. One is dull black and the other is bright silvered. The following temperatures are recorded.

| Time (Minutes) | 0 | 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Temp. $\left({ }^{\circ} \mathrm{C}\right)$ <br> Dull Surface | 19 | 21 | 23 | 25 | 27 | 29 |
| Temp. $\left({ }^{0} \mathrm{C}\right)$ <br> Bright Surface | 19 | 20 | 21 | 22 | 23 | 24 |

i. Study the table and explain why there is a difference between the rises in temperature of paraffin in the two cans.
ii. Explain why the heat from the heater could reach the cans by radiation only but not through either convection or conduction
12.b) On the axes provided in figure 9 sketckfag graph of mass per unit volume against water heated from $0^{0}$ to $10^{0}$

Figure 39

12.c) Water of mass 200 g at a temperature of $60^{\circ} \mathrm{C}$ is put in a well lagged copper calorimeter of mass 80 g . A piece of ice at $0^{\circ} \mathrm{C}$ and mass 20 g is placed in the calorimeter and the mixture stirred gently until all the ice melts. The final temperature T of the mixture is then measured. Given that ;Specific Latent heat of ice is $334000 \mathrm{~J} / \mathrm{Kg}$, Specific heat capacity of water is $4200 \mathrm{~J} / \mathrm{K} / \mathrm{Kg}$ and Specific heat Capacity of copper is $900 \mathrm{~J} / \mathrm{K} / \mathrm{Kg}$, Determine
i) The heat absorbed by the melting ice at $0^{0}$
ii) The heat absorbed by the melted ice (water) to rise to the temperature T (answer to be given in terms of T)
iii) The heat lost by the warm water and the calorimeter ( answer in terms of T)

The final temperature T of the mixture
b) The figure 10 below shows a windlass. An effort is applied on the handle which is turned on a radius eff 90 cm . as the handle turns a rope is wound around the drum of a diameter 28 cm , thas raising a bucket of water out of a well.

If an effort of 10 N is needed to lift to the bucket full of water of mass 4 Kg . Calculate;
i. The energy gained by the mass when the drum turns through one revolution(2MK)
ii. The work done by the effort during this revolution
(2MK)
iii. Suggest a reason why the two quantities in (i) and (ii) are not equal
iv. Calculate the velocity ration of the maghine and the efficiency of the windlass
(3MK)

## 14.a. State Newton's seconid law of motion

14.b. A driver driving a car of mass 1200 Kg at constant speed of $72 \mathrm{Km} / \mathrm{h}$ is flagged down by açăffic police officer. It takes him 2 s to react to the police signal and bring the car to rest by applying a constant breaking force in 10s. Determine the minimum stopping distance and the constant breaking force
(4MK)
14.c. An ordinary hydrometer of mass 20 g floats with 3 cm o its stem out of water. The area of cross-section of the stem is $0.75 \mathrm{~cm}^{2}$. find the total volume of hydrometer and the length above of surface when it floats in a liquid of relative density 1.4
(4MK)
15. a) State the difference between temperature measured in Kelvin scale and Celsius scale
(1MK)
15. b) Using Kinetic theory of gases, explaindfow pressure of a gas rises when the gas is heated at constant volume
15. c) Figure ii $\leqslant$ shows a set up that may be used to verify pressure Law.

15. d) Figure ii shows a set up that may be used to verify pressure law.
i). State the measurement that should be taken in the experiment
ii). Explain how the measurements in (i) above may be used to verify Pressure Law
iii). State one assumption of real gas laws
iv). At $20^{\circ} \mathrm{C}$, the temperature of a gras is 50 cm of mercury. At what temperature would the pressure of the gâs fall to 10 cm of mercury?
16. a. made at a frequency of 50 dots per second.

What is the time interval between the two consecutive dots
(1MK)
16. b. Draw an arrow on the tape that indicates the dots made at $\mathrm{t}=0$, indicate in a similar way the dots at $\mathrm{t}=0.2 \mathrm{~s}$
(1MK)

16. c. Determine the :
(i) Average velocity at intervals AB and CD
(4MK)
16. d. Figure 13 below shows,$\frac{1}{a}$ rectangular block of height 10 cm floating vertically in a beaker containing 2 imatiscible liquids A and B of densities $800 \mathrm{Kg} / \mathrm{m}^{3}$ respectively. The dimensions of the błock are 3 cm long by 2 cm wide by 10 cm high.

If the length of the block in liquid A is 5 cm and that in B is 3 cm , determine
i). Weight of the liquid displaced
ii). Weight of liquid B displaced
