INSTRUCTIONS TO CANDIDATES.

- Write your name and index number in the spaces provided
- Answer all the questions in section A in the spaces provided
- In section B answer question 6 (Compulsory) and either question 7 or 8 in the spaces provided.

FOR EXAMINERS USE ONLY

This paper consist of 8 printed pages.
Candidates should check the question paper to ascertain that all the pages are printed as indicated and that no question is missing.
1. Study the diagram below and answer the questions that follow

![Diagram]

a) Name the parts labelled A, B, C and D. (2 marks)

A_______________________________________________________________________
B_______________________________________________________________________
C_______________________________________________________________________
D_______________________________________________________________________

b) State the function of the fluid found in between the parts marked C. (1 mark)

_________________________________________________________________________

c) How is the part labelled E adapted to its function. (4 marks)

_______________________________________________________________________________
_______________________________________________________________________________
_______________________________________________________________________________
_______________________________________________________________________________

d) State the significance of rings of cartilage found around the part marked A and B. (1 mark)

_________________________________________________________________________

2. In an experiment to investigate a factor affecting photosynthesis, a leaf of a potted plant which had been kept in the dark overnight was covered with aluminium foil as shown in the diagram below:-

![Diagram]

The setup was kept in sunlight for three hours after which a food test was carried out on the leaf.

a) Which food test was carried out? (1 mark)

_________________________________________________________________________
b) i) State the results of the food test. (2 marks)

_______________________________________________________________________________
_______________________________________________________________________________

iii) Account for the result of the food test. (2 marks)

_______________________________________________________________________________
_______________________________________________________________________________

c) i) Why was the set up kept in sunlight for three hours? (1 mark)

_______________________________________________________________________________

ii) Why was it necessary to keep the plant in the darkness before the experiment? (1 mark)

_______________________________________________________________________________

d) Other than light, state one other factor that affect the rate of photosynthesis. (1 mark)

_______________________________________________________________________________

Examine the diagram below carefully and use it to answer the questions that follow:

![Diagram of plant cell]

a) Name the parts labelled X, Y and Z. (3 marks)

X____________________________________________________________________________

Y____________________________________________________________________________

Z____________________________________________________________________________

b) State one substance by which the part labelled W is made up of. (1 mark)

_______________________________________________________________________________

c) Name the process by which mineral salts move into the structure labelled X (1 mark)

_______________________________________________________________________________

d) Explain what happens to a red blood cell when placed in distilled water. (3 marks)

_______________________________________________________________________________

_______________________________________________________________________________

_______________________________________________________________________________

4 a) Name any two disorders in human caused by gene mutation. (2 marks)

_______________________________________________________________________________

_______________________________________________________________________________

_______________________________________________________________________________
b) Describe the following chromosomal mutations. (2 marks)
   a) Inversion
   b) Translocation.
   c) In mice the allele for black fur is dominant to the allele for brown fur. What percentage of offspring would have brown fur from across between heterozygous black mice? Show your working. Use letter B to represent the allele for black colour. (4 marks)

5 The diagram below shows a section of the functional unit of a mammalian kidney.

![Diagram of a mammalian kidney]

a) Identify the structure drawn. (1 mark)

b) Name the parts labelled J and M (1 mark)
   i) J
   ii) M

c) What causes the process that occurs in structure L? (1 mark)

d) Name one differences in the composition of fluids in structure K and O? (1 mark)
e) State one adaptation of part N to its function. (1 mark)
_________________________________________

f) State two adaptations that desert animals have to reduce water loss through urine. (2 marks)
_________________________________________

SECTION B (40 MARKS)

Answer question 6 (compulsory) in the spaces provided either question 7 or 8 in the spaces provided after question 8.

6. The data below was obtained from an experiment designed to measure the velocity of flow of water during the course of a single day in the xylem of two trees of the same species.

<table>
<thead>
<tr>
<th>Time of day/hr</th>
<th>0300</th>
<th>0600</th>
<th>0900</th>

</tbody>
</table>

a) Using the same axes, draw graphs to show the velocity of flow against time. (7 marks)

__ Graphs here __
b) At what time of the day was the velocity of flow same for the species? 

_______________________________________________________________________________

(1 mark)

c) Account for the shape of the graph of eucalyptus.

_______________________________________________________________________________

_______________________________________________________________________________

_______________________________________________________________________________

_______________________________________________________________________________

_______________________________________________________________________________

(4 marks)

d) What forces move the water through the plant?

_______________________________________________________________________________

_______________________________________________________________________________

_______________________________________________________________________________

_______________________________________________________________________________

_______________________________________________________________________________

(4 marks)

e) Determine the rate of flow at 1900 hours in.

i) Acacia

_______________________________________________________________________________

_______________________________________________________________________________

(2 marks)

ii) Eucalyptus

_______________________________________________________________________________

_______________________________________________________________________________

f) Suggest two features of Acacia that lead to the differences in the velocity flow.

_______________________________________________________________________________

_______________________________________________________________________________

_______________________________________________________________________________

_______________________________________________________________________________

_______________________________________________________________________________

(2 marks)

7. Describe the role of the following hormones in the growth and development of plants. 

(20 marks)

a) Auxins

b) Gibberellins

c) Cytokinins

d) Ethylene
8. Discuss the various evidences which show that evolution has taken place. (20 marks)
