## BUSIA COUNTY JOINT EVALUATION EXAMINATION-2014 <br> Kenya Certificate of Secondary Education CHEMISTRY

Paper 3

## Instructions to Candidates

* Write your name and index number in the spaces provided above.
* $\quad$ Sign and write the date of the examination paper.
* Answer ALL the questions in the spaces provided in the question paper.
* ALL working MUST be clearly shown where necessary.
* Mathematical tables and silent electronic calculators may be used.
* Candidates should check the paper to ascertain that all the pages are printed as indicated and that no questions are missing.

1. You are provided with:-

Solution A, 0.07 M hydrochlonie acid
1 g solid B, Calcium hydroxiae
You are required to defermine the solubility of $\mathrm{Ca}(\mathrm{OH})_{2}$
Procedure:
Transfer $\mathrm{al}^{\alpha^{5}}$ solid B into a $250 \mathrm{~cm}^{3}$ volumetric flask. Measure accurately using a clean measuripg cylinder $50 \mathrm{~cm}^{3}$ of water and transfer this carefully into the volumetric flask. Shake gently and measure a second portion of $40 \mathrm{~cm}^{3}$ water and add this to the resulting solation in the volumetric flask. Filter the solution into a beaker and label this solution D.

Place solution A in the burette, pipette $25.0 \mathrm{~cm}^{3}$ of solution D into a $250 \mathrm{~cm}^{3}$ conical flask and titrate using methyl orange indicator. Record your result in table below and repeat the titration carefully to obtain consistent results.

| Table | 1 | 2 | 3 |
| :--- | :--- | :--- | :--- |
| Final burette reading $\left(\mathrm{cm}^{3}\right)$ |  |  |  |
| Initial burette reading $\left(\mathrm{cm}^{3}\right)$ |  |  |  |
| Volume of A used $\left(\mathrm{cm}^{3}\right)$ |  |  |  |

Calculate:
(a) Volume of solution A used.
(1mk)
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(b) Number of moles of the solution A reacted.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(c) Number of moles of solution $D^{2}$ in the $25 \mathrm{~cm}^{3}$

$\qquad$
(d) Calculate mole of solution D in the $90 \mathrm{~cm}^{3}$ of the solution D . (1mk) $22^{2}$
(e) Calculate the mass of calcium hydroxide that dissolved in $90 \mathrm{~cm}^{3}$ of water. ( 2 mks )
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(f) Determine the solubility of calcium hydroxide at the room temperature. (2mks)
$\qquad$
$\qquad$
$\qquad$
$\qquad$
2. You are provided with:-

- Solution Y contained 0.2 M copper (II) sulphate per litre of solution
- Solid Z

You are required to determine the heat evolved when one mole of solution Y react with solid Z.

## Procedure

Measure $40 \mathrm{~cm}^{3}$ of solution y and place it into insulated $50 \mathrm{~cm}^{3}$ plastic beaker, stir the solution with the help of the thermometer and record its temperature after every half minute for $11 / 2$ minutes.

After exactly 2 minutes add all the solid Z provided and continue stirring the mixture while recording the temperature of solution and complete the table below.

Table

| Time (min) | 1/2 | 1 | 1.5 | ${ }^{2 x^{8}}$ | 2.5 | 3 | 3.5 | 4 | 4.5 | 5 | 5.5 | 6 | 6.5 | 7 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { Temp } \\ & 0_{\mathrm{c}} \end{aligned}$ |  |  | $x^{x^{3}}$ | X |  |  |  |  |  |  |  |  |  |  |

(b) (i) $\mathrm{O}_{\text {g the }}$ graph paper provided. Plot a graph of temperature against time. (4mks)
(ii) $e^{\partial^{2} e^{x y}}$ From your graph, determine the maximum temperature change.
$\qquad$
(c) Given that density of the solution is $1 \mathrm{~g} / \mathrm{cm}^{3}$, determine the quantity of heat evolved when the $40 \mathrm{~cm}^{3}$ of solution $Y$ is reacted completely with solid Z . Specific heat capacity of solution $=4.2 \mathrm{Jg}^{-1} \mathrm{~K}^{-1}$.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(d) (i) Given that solid Z is zinc powder. Write an ionic equation of the reaction which occurs
$\qquad$
$\qquad$
(ii) Determine the moles of copper (II) ions used up in the reaction.
$\qquad$
$\qquad$
$\qquad$
(iii) Determine the amount of heat that would be evolved of one mole of copper (II) ions were used up.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
3. You are provided with substance ${ }_{S}$ ? carry out the test below and record your observations and deductions in the table belof.
(a) Scoop a little of solid $\mathrm{K}^{5}$ with a clean metallic spatula and place it at the hottest part of a non-luminius flamés.

(b) Add about $10 \mathrm{~cm}^{3}$ of distilled water to the remaining solid K . divide the resulting mixture into 4 portions.
(i) To the $1^{\text {st }}$ portion add 3 drops of acidified $\mathrm{K}_{2} \mathrm{Cr}_{2} \mathrm{O}_{7}$

| Observation | Deductions |  |
| :--- | :--- | :--- |
|  |  |  |
|  | $(1 \mathrm{mk})$ |  |

(ii) To the $2^{\text {nd }}$ portion add 3 drops of bromine water and warm.

| Observation | Deductions |  |
| :--- | :--- | :--- |
|  |  |  |
|  | $(1 \mathrm{mk})$ |  |
|  |  | $(1 \mathrm{mk})$ |

(iii) Add 2-3 drops of universiol indicator to the $3^{\text {rd }}$ portion and determine the pH of the

(iv) To the $4^{\text {th }}$ portion add a spatula of sodium carbonate.

| Observation | Deductions |  |  |
| :--- | :--- | :--- | :--- |
|  |  |  |  |
|  | $(1 \mathrm{mk})$ |  | $(1 \mathrm{mk})$ |

(c) Dissolve one spatula endful of solid $L$ in about $10 \mathrm{~cm}^{3}$ of distilled water. Divide the solution in 3 portions.
(i) To the $1^{\text {st }}$ portion add $\mathrm{NaOH}_{(\mathrm{aq})}$ dropwise until in excess.

| Observation | Deductions |  |  |
| :--- | :--- | :--- | :--- |
|  |  |  |  |
|  |  |  |  |
|  | $(1 \mathrm{mk})$ |  | $(1 \mathrm{mk})$ |

(ii) To the $2^{\text {nd }}$ portion add dilute ammonia solution dropwise until in excess.

(iii) To the $3^{\text {rd }}$ portion add 2-3 drops of lead (II) nitrate solution and warm.

| Observation | Deductions |  |
| :--- | :--- | :--- |
|  |  |  |
|  | $(1 \mathrm{mk})$ |  |
