## PHYSICS

## PRACTICAL

TIME: 2HRS 30 MINUTES

## IASTRUCTIONS

- Write you name, index number, admission number and your class.
- Use the first $\mathbf{1 5}$ minutes of $\mathbf{2 1 / 2} \mathbf{~ h r s ~ t o ~ s t u d y ~ t h e ~ q u e s t i o n s ~ p r o p e r l y . ~}$
- answer all questions

FOR EXAMINERS USE ONLY

| QUESTION | MAX. SCORE | CAND. SCORE |
| :---: | :---: | :---: |
| $\mathbf{1}$ | $\mathbf{2 0}$ |  |
| 2 | $\mathbf{2 0}$ |  |
|  | $\mathbf{4 0}$ |  |

## QUESTION ONE

You are provided with the following;
-A 400ml glass beaker

- A Bunsen burner
- A thermometer
- A stop watch
- A tripod stand and a meastríng cylinder 100 ml
- A wire gauze
- A source of heat.

Set up the apparatus as shown in the diagram below.

Measure $100 \mathrm{~cm}^{3}$ of water and pour it into the beaker. Take the initial temperature of the water.
To.
Now heat the water to a temperature of $90{ }^{\circ} \mathrm{C}$. Switch off the gas tap and place a thermometer into the beaker and start the stop watch when the temperature is $65^{\circ} \mathrm{C}$. Take the temperature $\mathrm{T}^{0} \mathrm{C}$ of water every two minutes. Record your results in the table below.

| Time $(\mathrm{t})$ <br> $(\mathrm{min})$ | 2 | 4 | 6 | 8 | 10 | 12 | 14 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Temperature <br> $(\mathrm{T})^{\circ} \mathrm{C}$ |  |  |  |  |  |  |  |
| $\left(\mathrm{T}-\mathrm{T}_{0}\right)^{0}$ |  |  |  |  |  |  |  |
| Log $\left(\mathrm{T}-\mathrm{T}_{0}\right)$ |  |  |  |  |  |  |  |

(i) Plot a graph of $\log \left(\mathrm{T}-\mathrm{T}_{\mathrm{O}}\right)$ against Time ( t$)$.

## 

(ii) Find the value K of $\log \left(\mathrm{T}-\mathrm{T}_{\mathrm{O}}\right)$ when $\mathrm{t}=0$
$\qquad$
$\qquad$
$\qquad$
(iii)Calculate the $\mathcal{C e m p e r a t u r e ~ o f ~ t h e ~ t h e ~}^{2} \mathrm{~T}_{\mathrm{R}}$ using the expression Antilog $K=65-T_{R}$.

## QUESTION TWO

This question has two parts A and B. answer both parts.
PART A
You are provided with the following:

- A meter rule
- Two identical 100 g masses
- About 200 ml of liquid L in 250 ml beaker
- Three pieces of thread, each about half metre long.
- Stand with clamps
- Tissue paper.

Proceed as follows:
(a) Using a stand and one piece of thread, suspend the metre rule in air such that it balances horizontally. Record the position of the centre of gravity. G.

$$
\mathrm{G}=\ldots \mathrm{mm}
$$

NOTE: The metre rule should remain suspended at this point through out the experiment.
(b) Set up the apparatus as in figure 2 below.

Susperd the mass A at a distance $\mathrm{x}=50 \mathrm{~mm}$. adjust the position of mass B until it balances mass A inofnersed in liquid $L$.

Record the distance d, of mass B from the pivot.
Repeat the same process for other values of x in table 2 below and complete the table.

| $x(\mathrm{~mm})$ | 50 | 100 | 150 | 200 | 250 | 300 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{~d}(\mathrm{~cm})$ |  |  |  |  |  |  |

(c) Plot a graph of d (y axis) against x . $\partial^{e e^{e^{c}}}$

$\square \square \square$

| $\square$ | - | , | $\square$ | ! | $\square$ | $\square$ | , | - | ! | $\square$ | - | , | - | ! | $\square$ | - |  |  | $\square$ | - | , | - | - | ! | - |  |  |  |  | , |  |  |  | - |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | ! |  |  |  |  | + |  |  |  |  | ! |  |  |  |  | ! |  |  | - |  | - | - |  |  |  |  | ! |  |  |  |  |
|  |  |  |  | ! |  |  |  |  | + |  |  |  |  |  |  |  |  |  | ; |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## 

A
(d) Determine the slope, $S$ of the graph.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
 of A, find:-
(i) The value of F .

(ii) The upthrust, U
$\qquad$
$\qquad$
$\qquad$

## PART B

You are provided with the following:

- A concave mirror with holder
- A screen
- A meter rule
- A candle
- A match box (to be shared)

Proceed as follow:
(f) Set up the apparatus as in figure 3 below.

(g) Put the oblect at a distance $u=30 \mathrm{~cm}$ from the mirror. Adjust the position of the screen until a sharp image is formed on the screen. Record the distance V.
(h) Repeat procedure (b) above for the distance $u e^{-\varepsilon^{5}} 40 \mathrm{~cm}$ and record the new distance V. complete the table 3 below.

| U(cm) | V (cm) | x $x^{20 y}$ | (m+1) |
| :---: | :---: | :---: | :---: |
| 30 |  |  |  |
| 40 |  |  |  |

(i) Given $f=\frac{V f^{5}}{\left(m^{2}-1\right)}$, calculate the values of f hence determine the average value $\mathrm{f}_{\mathrm{av}}$ :

## End
