# PHYSICS (PRACTICAL) 

PAPER 3
JULY/AUGUST 2014
TIME ${ }_{2}^{21}{ }_{2}$ HOURS

## KAMUKUNJI DISTRICT KCSE EVALUATION TEST - 2014

## INSTRUCTIONS TO CANDIDATES

-Answer ALL the questions in the spaces provided in the question paper.
-You are supposed to spend the first 15 minutes of the $2 \frac{1}{2}$ hours allowed for this paper reading the whole paper carefully before commencing with your work.
-Marks are given for a clear record of the observations actually made, their accuracy and suitability and the use made of them.
-Candidates are advised to record their observations as soon as they are made.
-Mathematical tables and Electronic calculators may be used.
FOR EXAMINER’S USE ONLY

| Question | Maximum score | Candidate's score |
| :--- | :--- | :--- |
| 1 | 20 |  |
| 2 | 20 |  |
| Total | 40 |  |

1) You are provided $\underset{\hat{x} \text { ith }}{x}$ the following apparatus:
-Resistance wire mounted on a scale labelled MN
-Switche
-Volemeter
${ }^{\circ}{ }^{\circ} \mathrm{mmmeter}$
-Two dry cells in a cell holder

- Seven connecting wires
i) Set up the apparatus as shown in the figure below:

ii) Remove the crocodile clip from the resistance wire MN and close the switch. Record the voltmeter reading.

$$
Y=\ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots . . V
$$

iii) Attach the crocodile clip to the resistance wire such that $\mathrm{L}=10 \mathrm{~cm}$.
iv) Record the voltmeter and the ammeter readings in table 1.
v)Repeat procedures (iii) and (iv) for $\mathrm{L}=20 \mathrm{~cm}, 30 \mathrm{~cm}, 40 \mathrm{~cm}, 50 \mathrm{~cm}, 60 \mathrm{~cm}, 70 \mathrm{~cm}$, and 80 cm .
vi) Complete table 1

Table 1
vis

| Length (cm) | 10 | $4$ | 30 | 40 | 50 | 60 | 70 | 80 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Current I(A) | $e^{e^{-e^{e^{4}}}}$ |  |  |  |  |  |  |  |
| $\text { p.d. } \left.(\mathrm{V}) \varsigma^{2}\right)^{x}$ |  |  |  |  |  |  |  |  |
| $t^{x^{2}-V(v)}$ |  |  |  |  |  |  |  |  |
| $\left.\frac{v}{(\bar{v}} \bar{v} \bar{\nu}\right)\left(\frac{v}{v}\right.$ |  |  |  |  |  |  |  |  |
| $\mathrm{R}=\frac{\bar{V}}{I}(\quad)$ |  |  |  |  |  |  |  |  |

vii) a) Plot a graph of $\frac{\mathbf{V}}{\mathbf{Y}-\mathbf{V}} \quad$ (y-axis) against $R$.
(5mks)

b) Determine the slope of your gaph.
c) Given that the law relating V, Y and R is

2) You are provided with the following:

- A glass block
-soft board
-a plane paper
-four optical pins
-four paper pins
- a protractor
- a 30 cm plastic ruler
a) Fix the plane paper on the soft board using the four paper pins .
b) Place the glass block on the plane paper. Let the glass block rest on the paper from the broader face.
c) T race the glass block using a pencil
d) Remove the glass block.

Mark a point X on one of the longer side of the traced glass block as shown in figure 2. Point X should be 2 cm from edge $A$.
e) Construct a normal at X to emerge through line DC . Let this normal meet line DC at point M . f) Mark point N along the emergent normal 5 cm from M .
g) Construct the line NP to meet the normal at N at $90^{\circ}$. Line NP can be about 10 cm .
h) Using a protractor, construct an incident ray RX at an angle of incidence $=10^{\circ}$. Fix two pins $P_{1}$ and $P_{2}$ along RX.
i) Replace the glass block to the traced figure.
j) View the path of the incident ray RX through the glass block using the other two pins $P_{3}$ and $P_{4}$. This can be done by ensuring that the images of $P_{1}$ and $P_{2}$ are in a straight line with the pins $\mathrm{P}_{3}$ and $\mathrm{P}_{4}$.
k) Remove the glass block and draw the emergent ray through $\mathrm{P}_{3}$ and $\mathrm{P}_{4}$.

1) Measure the distance, $d$ of the emergent ray from point $N$ along line $N P$ as shown in figure 3 .

m) Record the corresponding values of $d$ in table 2

Table 2

| Angle of <br> incidence i | $10^{0}$ | $20^{0}$ | $30^{0}$ | $40^{0}$ | $50^{0}$ | $60^{0}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Distance ,d <br> $(\mathrm{cm})$ |  |  |  |  |  |  |
| $\operatorname{Sin} \mathrm{i}$ |  |  |  |  |  |  |
| $\operatorname{Sin}^{2} \mathrm{i}$ |  |  |  |  |  |  |

n) Repeat the procedure for other values of i.
o) Plot a graph of $\sin ^{2} i$ ( $y$-axis) against $d$
p) Calculate the gradient of the graph.
