## KISII SOUTH DISTRICT JOINT EVALUTION TEST-2014 <br> Kenya Certificate of Secondary Education (KCSE)

233/3
CHEMISTRY
Paper 3
(PRACTICAL)
Oct/Nov-2013
Time: 2 Hours

## INSTRUCTIONS TO CANDIDATES

1. Write your name and Index number in the spaces provided.
2. Answer ALL the questions.
3. Answers must be written in the spaces provided in the question paper.
4. Additional pages must not be inserted.
5. Candidates should check the question paper to ascertain that all the pages are printed.
6. This paper consists of 12 printed pages

## FOR EXAMINER'S USE ONLY

| QUESTION |  | MAXIMUM SCORE | CANDIDATE'S SCORE |
| :--- | :--- | :--- | :--- |
|  |  |  |  |

This paper consists of 8 printed pages.
Candidates should check the question paper to ensure that all pages are printed as indicated and no questions are missing.

1. You are provided with the following:
i) Solution M which is 0.2 M sodiun hydrochloric acid.
ii) Solution N which is a Hydreghloric acid
iii) $\quad 1.0 \mathrm{~g}$ solid X which is a eqtrbonate $\mathrm{F}_{2} \mathrm{CO}_{3}$.

You are required to:

- Standardize solution N
- Determine, , h้e RAM of F in $\mathrm{F}_{2} \mathrm{CO}_{3}$.

Procedure

- Fill the bafrrete with dilute Hydrochloric acid ( Solution N)
- Pippete $25 \mathrm{~cm}^{3}$ of sodium hydrotide solution M into a conical flask
- 造
- Titrate this solution with solution with solution N and record your result in table I below. Repeat the procedure two more times to complete the table.

| Table | 1 | 2 | 3 |
| :--- | :--- | :--- | :--- |
| Final burette readings $\left(\mathrm{cm}^{3}\right)$ |  |  |  |
| Initial burette readings $\left(\mathrm{cm}^{3}\right)$ |  |  |  |
| Volume of HCl used $\mathrm{cm}^{3}($ solution N$)$ |  |  |  |

(3 mks)
a) i) Determine the average volume of solution N used.
ii) How many moles of sodium Hydroxide are there in $25 \mathrm{~cm}^{3}$ of solution M used.
iii) Calculate the concentration of $\mathrm{HCl}\left(\right.$ solution N ) in moles per $\mathrm{dm}^{3}$

Procedure II

- Measure 100 cm of Hydrochloric acid(solution N ) into a clean beaker. Put all solid X in the beaker containing $100 \mathrm{~cm}^{3}$ of solution N . Leave the acid to react with solid X for 3 minutes.
- Label the resulting solution as L.
- Fill the burette with solution L.
- Titrate this solution with $25.0 \mathrm{~cm}^{3}$ portions of sodium Hydroxide solution M.
- In the conical flask using methyl orange indicator. Repeat the procedure to complete the table II below.

| Table II | 1 | 2 | 3 |
| :--- | :--- | :--- | :--- |
| Final burette readings $\left(\mathrm{cm}^{3}\right)$ |  |  |  |
| Initial burette readings $\left(\mathrm{cm}^{3}\right)$ |  |  |  |
| Volume of solution L used $\mathrm{cm}^{3}$ |  |  |  |

( 3 mks )
b) i) Calculate the average volume $\sigma \dot{f}^{\circ}$ solution $L$ used.
ii) Find the number of moles $\theta \mathrm{f}$ solution L in the average volume.
iii) Find the number of mates of solution $L$ in $100 \mathrm{~cm}^{3}$.
iv) Number of moles Hydrochloric acid in the original solution N .
v) Find the number of moles of HCl which reacted with solid $\mathrm{X}\left(\mathrm{F}_{2} \mathrm{CO}_{3}\right)$
vi) Find the fiumber of moles of solid X which reacted with acid.
vii) Find, the reactive molecular mass of solid $X$ and hence the relative atomic mass of $e^{1 e^{f}}$
2. You are provided with the following:
i) $e^{2}{ }^{x}$ Solution D, which is 2 M Hydrochloric acid
iij $\delta^{\hat{\prime}}$ Solution B, which is 0.1 M sodium Thiosulphate $\left(\mathrm{Na}_{2} \mathrm{~S}_{2} \mathrm{O}_{3}\right)$
You are required to find out the effect of change of temperature on the rate of reaction between Sodium thioslphate and hydrochloric acid.
NB: The end result of this reaction is the formation of a yellow/ white precipitate of colloidal sulphur.

## Equation:

$\mathrm{Na}_{2} \mathrm{~S}_{2} \mathrm{O}_{3(\mathrm{aq})}+\mathrm{HCl}_{(\mathrm{aq})} \longrightarrow \mathrm{S}_{(\mathrm{s})}+\mathrm{SO}_{2(\mathrm{~g})}+2 \mathrm{NaCl}_{(\mathrm{aq})}+\mathrm{H}_{2} \mathrm{O}_{(\mathrm{l})}$

## Procedure:

i) Measure $5 \mathrm{~cm}^{3}$ of solution $D$ into a clean 100 cm 3 glass beaker.
ii) Place it together with its contents on a white piece of paper with the word CHEM written on it in bold print.
iii) Measure the temperature of the solution D
iv) Record it as shown below in the Table
v) Measure 100 cm 3 of solution B
vi) Add this to the contents of the beaker in(i) above set off the stop watch or clock immediately.
vii) Record the time taken for the printed word CHEM to become invisible when viewed above the reaction mixture in the 100 cm 3 beaker
viii) Thoroughly wash the beaker used in (i) above
ix) Repeat the experiment using HCl solytion D at the temperature indicated in the table.

(6 mks)
On the grids provided plot a graph of:
i) Time (sec) on x axis against Temperature ${ }^{\circ} \mathrm{C} y$ axis

ii) $\quad$ Recipricoal of time $1 / \mathrm{t} \mathrm{s}^{-1} \mathrm{x}$ axis against Tefinperature ${ }^{\circ} \mathrm{C}$ (y axis)

b) Comment on the effect of change of temperature on the rate of the reaction between sodium thiosulphate and hydrochloric acid.
c) Use the graph of temperature against the recipricoal of time in a) (ii) above to estimate the time that the reaction would take at $58{ }^{\circ} \mathrm{C}$
d) Use the graph of time against temperature in a(i) bove to calculate the rate of reaction at $43^{\circ} \mathrm{C}$
3. a) You are provided with solid L. Use it to carry out the tests below and record your results in the table provided.

| TEST | OBSERVATION |  | INFERENCES |  |
| :---: | :---: | :---: | :---: | :---: |
| a) Transfer all solid $L$ into a boiling tube. Add 10 cm 3 of 1 M HNO3 and shake Dip a glass rod into calcium Hydroxide solution and place it at the mouth of the boiling tube. |  | 1 mk |  | $1 / 2 \mathrm{mk}$ |
| b) To about 2 cm 3 of the solution in a test tube add 3 drops of lead II Nitrate solution and warm |  | 1 mk |  | $1 / 2 \mathrm{mk}$ |
| c) To about 2 cm 3 of the solution in another test tube add 2 M |  |  |  |  |

| sodium Hydroxide solution drop wise till in excess | $1 / 2 \mathrm{mk}$ | $1 / 2 \mathrm{mk}$ |
| :---: | :---: | :---: |
| d) To about 2 cm 3 of solution in another test tube dip a clean metallic spatula in the solution and place it on a burner flầme. | $1 / 2 \mathrm{mk}$ | $1 / 2 \mathrm{mk}$ |

b) You afe provided with solid Q , you are required to:
i) $e^{\gamma^{2}}$ Carry out the tests described below on solid $Q$

วii) Record your observations and inference accordingly
iii) Test any gases provided.

Procedure:
i) Place a spatula full of solid Q in a boiling tube
ii) Add about 15 cm 3 of distilled water and shake
iii) Divide the resulting solution into four portions
iv) Use a universal indicator paper to test portion one of the solution

| Observation | Inference |  |
| :--- | :--- | :--- |
|  |  |  |
|  |  |  |
| $1 / 2 \mathrm{mk}$ | $1 / 2 \mathrm{mk}$ |  |

v) Add a spatula full of sodium carbonate to the second portion.

| Observation |  | Inference |
| :--- | :--- | :--- |
|  |  |  |
| $1 / 2 \mathrm{mk}$ | $1 / 2 \mathrm{mk}$ |  |

vi) Add three drops of acidified Betassium Manganate (vii) solution to the third portion.

viii, ${ }^{0}$ Place 4 cm 3 of Ethanol in a test tube Add two drops of concentrated Sulphuric (vi) acid and then a spatula full of solid Q shakes well and warm the mixture carefully. Pour the warm mixture into the smell.

| Observation |  | Inference |
| :--- | :--- | :--- |
|  |  |  |
|  |  |  |
| $1 / 2 \mathrm{mk}$ | $1 / 2 \mathrm{mk}$ |  |
