This paper consists of 12 printed pages.
Candidates should check the question paper to ensure that all pages are printed as indicated and no questions are missing.

© The Bondo District Examination Committee 2007

Biology 231/1
1. Explain how sunken stomata lower the rate of Transpiration. (2mks)

2. a) Which structures make Angiospermaphyta more efficient in transport of water and mineral salts than the Gymnospermaphyta. (1mk)

   b) How are the structures named in (a) above adapted to that function? (3mks)

3. Differentiate between guttation and transpiration. (2mks)

4. An experiment was carried out to investigate a growth response in a maize seedling as shown in the diagrams below.
a) State the type of response being investigated. (1mk)

b) Explain the response exhibited by the shoot. (4mks)

5. The oxidation of a certain substrate is represented by the chemical equation shown below.
\[
C_{57}H_{104}O_6 + 80O_2 \rightarrow 57CO_2 + \text{Energy}
\]
a) Calculate the respiratory quotient (RQ) of the substrate. (2mks)

b) Identify the above substrate. (1mk)

6. The following diagram represents a part of a flower.

![Diagram of a flower part]

a) Name the parts labelled B and C. (2mks)
b) State the function of part A. (1mk)

……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………

7. a) Name the process in human beings that may lead to addition or loss of one or more chromosomes. (1mk)

……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………

b) State three benefits of polyploidy in plants to a farmer. (3mks)

10. Study the diagram shown below of the anterior view of a lumbar vertebra of a mammal.

```
A
B
C

Neural canal
```

a) Name the parts labelled A and B. (2mks)

A .................................................................
B .................................................................

b) State the function of part C. (1mk)

................................................................................
................................................................................
................................................................................
................................................................................
................................................................................
................................................................................
................................................................................
................................................................................

11. What are the limitations of the use of the quadrat method in estimating population? (3mks)

................................................................................
................................................................................
................................................................................
................................................................................
................................................................................
................................................................................
................................................................................
................................................................................

12. What are the functions of the following hormones in the female reproduction.

a) Follicle Stimulating Hormone (FSH) (1mk)

................................................................................
................................................................................
................................................................................
................................................................................

b) Oxytocin (1mk)

................................................................................
................................................................................
................................................................................
................................................................................
................................................................................
................................................................................

13. Name the respiratory surfaces of the following organisms:

(i) Spider ................................................................ (1mk)
(ii) Mosquito larvae ........................................... (1mk)
(iii) Nile Perch .................................................. (1mk)
14. a) Give a reason why glucose does not normally appear in urine even though it is filtered in the mammalian Bowman’s capsule. (2mks)

___________________________________________________________________________

___________________________________________________________________________

___________________________________________________________________________

___________________________________________________________________________

b) Which hormones are involved in the salt-water balance in the human body. (2mks)

___________________________________________________________________________

___________________________________________________________________________

___________________________________________________________________________

___________________________________________________________________________

15. Explain why the presence of carboxyhaemoglobin in the blood leads to death. (2mks)

___________________________________________________________________________

___________________________________________________________________________

___________________________________________________________________________

___________________________________________________________________________

16. The relative rates of photosynthesis in a certain plant were determined at different temperatures. The results were as shown in the table below.

<table>
<thead>
<tr>
<th>Temp. °C</th>
<th>Relative rate of photosynthesis (mg/hr)</th>
</tr>
</thead>
<tbody>
<tr>
<td>25</td>
<td>20</td>
</tr>
<tr>
<td>30</td>
<td>70</td>
</tr>
<tr>
<td>35</td>
<td>100</td>
</tr>
<tr>
<td>40</td>
<td>25</td>
</tr>
</tbody>
</table>

Account for the rate of photosynthesis at
(i) 35° C (1mk)

___________________________________________________________________________

___________________________________________________________________________

___________________________________________________________________________

(ii) 40° C (1mk)

___________________________________________________________________________

___________________________________________________________________________

___________________________________________________________________________
17. Explain how the following are adapted to their functions.

(a) Guard cell

(b) Spongy mesophyll

18. a) Differentiate between incomplete and complete metamorphosis. Give example in each case.

b) State the functions of Ecdysone hormone.

19. Study the equation below and answer the questions that follow:

\[
\text{Sucrose} \xrightarrow{\text{Enzyme}} \text{Glucose} + A \xrightarrow{\text{Heat}}
\]

a) Identify the product represented by A.

b) Name the region in the alimentary canal where this process occurs.
c) Name the enzyme responsible for the above reaction. (1mk)

........................................................................................................................................

........................................................................................................................................

20. When preparing plant sections to be observed under the microscope:
a) Water is used to mount the tissues
b) Very thin sections of the plant should be cut
Give a reason why each of these steps are carried out. (2mks)
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................

21. Explain two ways in which the trachea of an insect is adapted to perform its functions. (2mks)
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................

22. Outline two ways in which bisexual flowers are adapted to cross-pollination. (2mks)
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................

23. Explain why blood from a donor whose blood group is A cannot be transfused into a recipient whose blood group is B. (2mks)
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
24. The diagram below shows a cross section of a dicotyledonous plant stem. Study it and answer the questions that follow.

![Diagram of a cross section of a dicotyledonous plant stem]

a) Identify parts labelled P and Q. (2mks)
   P ………………………………………………………………….
   Q ………………………………………………………………….

b) State the function of part labelled S. (1mk)
   …………………………………………………………………………………………………………………
   …………………………………………………………………………………………………………………
   …………………………………………………………………………………………………………………

25. State how the human beings sperm cell is adapted to its function. (3mks)
   …………………………………………………………………………………………………………………
   …………………………………………………………………………………………………………………
   …………………………………………………………………………………………………………………
   …………………………………………………………………………………………………………………
   …………………………………………………………………………………………………………………
   …………………………………………………………………………………………………………………
   …………………………………………………………………………………………………………………
26. a) Name the compound that stores energy released during oxidation of glucose. (1mk)
……………………………………………………………………………………………………
……………………………………………………………………………………………………
b) A goat weighing 15.2kg requires 216KJ while a rat weighing 50g requires 2736KJ per day. Explain. (2mks)
……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………
27. a) Explain why mosquitoes become resistant to insecticides with time. (2mks)
……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………
b) Other than the example in (a) above, give two other examples of natural selection in action. (2mks)
……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………
……………………………………………………………………………………………………
