## Paper 3

(PRACTICAL)
JUNE/JULY- 2012
Time: $21 / 2$ Hours

## BUTERE DISTRICT JOINT EVALUATION - 2012

Kenya Certificate of Secondary Education (K C.S.E.)

## INSTRUCTIONS TO CANDIDATES

1. Write your name and Index Number in the spaces provided above.
2. Sign and write the date of examination in the spaces provided above
3. Answer all the questions in the spaces provided in the question paper.
4. You are supposed to spend the first $\mathbf{1 5}$ minutes of the $21 / 2$ hours allowed for this paper reading the whole paper carefully before commencing your work.
5. Marks are given for a clear record of the observations actually made, their suitability, accuracy and the use made of them.
6. Candidates are advised to record their observations as soon as they are made.
7. Non-programmable silent electronic calculators and KNEC mathematical tables may be used.

QUESTION I

| PART A | II | IV | V | VI |
| :--- | :--- | :--- | :--- | :--- |
| MAXIMUM SCORE | 1 | 1 | 1 | 2 |
| CANDIDATES SCORE |  |  |  |  |

TOTAL

This paper consists of 8 printed pages.

## Question 1 (Part a) (13 marks)

## You are provided with the following apparatus

- Clamp
- Stand
- Optical pin
- Copper Wire
- Protractor (y'your own)
- Two pieces of plasticine
- Stop watch
- $e^{\sigma^{s} \text { Cork }}$

Set up the apparatus as shown in the diagram below.

b) Bend the wire in the middle so as to make an angle of $50^{\circ}$. Attach the two small pieces of plasticine at both ends of the bent wire as shown in the diagram
c) Place the bent wire on the optical pin and give a small horizontal displacement. Take the time for 10 oscillations and record in the table below:
d) Repeat the procedure above for othervalues of $\theta$ and complete the table below

| Angle <br> $\theta^{0}$ | Time t for 10 oscillations (sec) | Periodic Time Te Psec) | Frequency f (HZ) | $\mathrm{f}^{2}(\mathrm{~Hz})^{2}$ | $\operatorname{Cos}(\theta / 2)$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 50 | $\sin ^{\circ}$ |  |  |  |  |
| 60 | ${ }^{\chi}$ |  |  |  |  |
| 70 | $3{ }^{5}$ |  |  |  |  |
| $80 \text { e } e^{-x c^{4}}$ |  |  |  |  |  |
| $90^{0}$ |  |  |  |  |  |
| 100 |  |  |  |  |  |

e) (i) On the graph paper provided, plot a graph of $\mathrm{f}^{2}$ (y-axis) against $\operatorname{Cos}(\theta / 2)(4 \mathrm{mks})$
ii) Determine the gradient of the graph
iii) The equation for the oscillation of the wire is given by the formula $f^{2}=\frac{1.5 K}{4 \pi L} \cos \left(\frac{\theta}{2}\right)$

Given that $\mathrm{L}=0.15 \mathrm{~m}$
Use the gradient of the graph to determine the value of K
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Question 1 (part b) (7mks)

## You are provided with the following apparatus:

- Prism
- 4 optical pins
- Plain paper
- Protractor $\Delta$
- Someøflasticine
- Soft board
I) Set ur the apparatus as shown below.

II). Measure angle A of the prism using a protractor.
$\qquad$
$\qquad$
$\qquad$
Ill). Place the prism on a plain paper and trace its outline with a pencil. Attach some plasticine to the prism to indicate the prism angle, A.
Construct a normal at point T along LM. Draw an incident ray to strike the prism at $40^{\circ}$.

Replace the prism and stick pins $P_{1}$ and $P_{2}$ tef 自efine the incident ray. View pins $P_{1}$ and $P_{2}$ from the opposite face (MN). Insent pins $P_{3}$ and $P_{4}$ so that they appear to be in line with images of $\mathrm{P}_{1}$ and $\mathrm{P}_{2}$
Remove the prism and join $\mathrm{P}_{3}$ addd $\mathrm{P}_{4}$ to give emergent ray.
Extrapolate the emergent ray
IV). a) Measưre angle D
(2mks)
 $\cdots \cdot p^{s^{x}}$边
b) Calculate the value of

$$
\eta=\frac{\cos \left(90^{\circ}-\frac{A+D}{2}\right)}{\operatorname{Sin}\left(\frac{A}{2}\right)}
$$

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
c) What is the significance of $\eta$ ?
$\qquad$
$\qquad$

## Question 2 <br> (20 marks)

You are provided with the following

- Two dry cells (size D)
- One bulb
- $\quad$ Voltmeter (0-3voŕ $0-5 \mathrm{v}$ )
- Ammeter (0-2.5AN)
- A mounted nicrome wire mounted on a millimeter scale
- Switch $z^{5^{5}}$
- SeRen connecting wire at least two with crocodile clips
- $e^{2}$ Micrometer screw gauge

Proceedes follows:
a) ${ }^{2} e^{8}$ i) Set up the circuit as shown in figure below:

b)
ii) With the crocodile clip at P take the voltmeter reading and the ammeter reading. Record V and I.
Repeat the readings for $d \delta=80,60,40,20$ and 0 cm respectively.
Complete the table betlow

| Length(cin) | 100 | 80 | 60 | 40 | 20 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Voltage, V(V) |  |  |  |  |  |  |
| Gurrent I(A) |  |  |  |  |  |  |

What changes do you observe on the bulb as L decreases from P ?
$\qquad$
iv) Plot a graph of the ammeter reading (y-axis) against voltmeter reading.
(Provide a graph paper)
v) Determine the slope of your graph at $\mathrm{V}=\mathrm{I}$ volt.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
vi) What physical quantity is represented by the slope of the graph at any given point ( 1 mk )
$\qquad$
$\qquad$
$\qquad$
c) i) Given the apparatus in a (i) above, $\operatorname{draf}^{5}$ a diagram of the circuit you would use to

ii) Set up the ciricuit you have drawn. Record the ammeter reading I and the voltmeter reading,$V$. when $L=100 \mathrm{~cm}$.
$\mathrm{V} \cdot \mathrm{e}^{e^{-2}}=$ $\qquad$
$\qquad$
iii) Using a micrometer screw gauge, measure the diameter of the wire. $\mathrm{d}=$ $\qquad$ m
$\qquad$
$\qquad$
$\qquad$
iv) Calculate the quantity:

$$
\mathcal{f}=0.785 \frac{(V)}{I} \frac{\left(d^{2}\right)}{L} \text { and give its units, where } \mathrm{L} \text { is one metre. }
$$
