NANDI NORTH SUB-COUNTY JOINT **EVALUATION 2014**

Kenya Certificate of Secondary Education (K.C.S.E.)

CHEMISTRY PAPER 3

TIME: 2 1/4 HOURS

INSTRUCTIONS TO CANDIDATES

- Write your Name, Index Number and School in the spaces provided above.
- Answer ALL the questions in the spaces provided.
- You are NOT allowed to start working with the apparatus for the first 15 minutes of the 21/4 hours allowed for this paper. This time is to enable you to read the question paper and make sure you have all the apparatus and chemicals that you may need.
- ALL working must be clearly shown.
- Mathematical tables and electronic calculators **may be** used.
- All answers must be written in English.

FOR EXAMINER'S USE ONLY

1. You are provided with:-

 \bullet Solid T, hydrated ethanedioic acid $H_2C_2O_4.nH_2O$.

Solution Q, a 0.2M solution of sodium hydroxide.

You are required to determine:

- Solubility of solid T. (i)
- The value of n is the formula $H_2C_2O_4.nH_2O$. (ii)

Procedure I

- Fill the burette with distilled water. (i)
- (ii) Place solid T in the boiling tube.
- Transfer 4cm³ of distilled water from the burette into the boiling tube containing (iii) solid T. Heat the mixture while stirring with the thermometer to a temperature of 80°.
- (iv) Allow the solution to cool while stirring with the thermometer. Record the temperature at which crystals start to form in the table 1 below.
- Add a further 2cm³ of distilled water from the burette to the mixture. Repeat (v) the procedure (iii) and (iv) above and record the crystallization temperature. Complete the table I below by adding the volumes of distilled water as indicated.

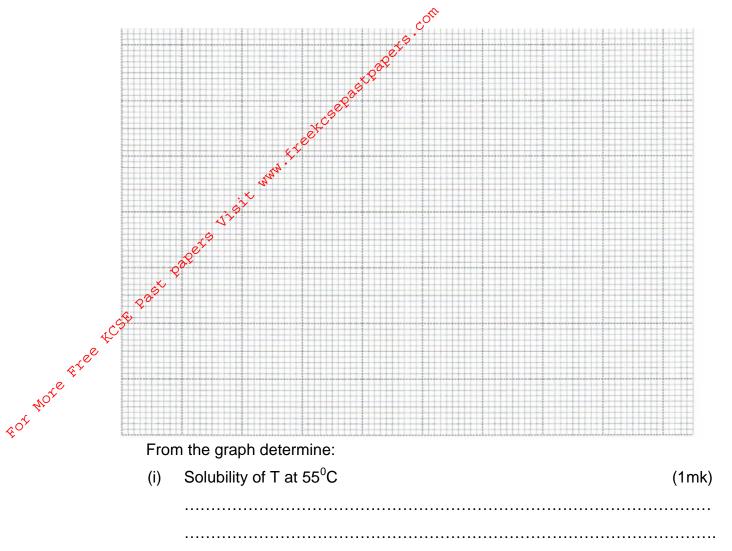

(Preserve the contents of the boiling tube for procedure II)

TABLE I

Volume of distilled water in boiling tube	Crystallization temperature	Stability of solid T in 100g / water
4		
6		
8		
12		

(6mks)

(a) On the grid provided, plot a graph of solubility of solid T (y-axis) against crystallization temperature. (3mks)

(ii)	The temperature at which 80g of T dissolve in 100g of water.

Procedure II

- Transfer the contents of the boiling tube in procedure I to a clean 250ml volumetric flask. Add distilled water to the mark. Label the resulting solution T.
- Fill the burette with solution T. Pipette 25cm³ of Q into a clean 250ml conical flask. Add 3 drops of phenolphthalein indicator.
- Titrate T against Q to an accurate end point. Record your results in the table II below.
- Repeat the experiment two more times and complete the table II below.
