# MOKASA JOINT EXAMINATION <br> Kenya Certificate to Secondary Education PHYSICS PAPER 3 <br> <br> PRACTICAL 

 <br> <br> PRACTICAL}

## Instructions

- Write your name, admission number, class and signature in the spaces provided at the top of the page.
- Answer all the questions in the spaces provided in this paper.
- You are supposed to spend the first 15 minutes of the $21 / 2$ hours allowed for this paper reading the whole paper carefully before your start.
- Marks will be given for clear record of observations actually made, for their suitability and accuracy, and the use made of them.
- Candidates are advised to record their observations as soon as they are made.
- Electronic calculators and mathematical tables may be used.

FOR EXAMINER'S USE ONLY

| Question(s) | Maximum Score |  |
| :---: | :---: | :---: |
| $\mathbf{1}$ | Candidate's Score |  |
| $\mathbf{2}$ | I | 16 |
|  |  |  |  |
| II | 4 |
|  |  |  |
| TOTAL | $\mathbf{4 0}$ |  |
|  |  |  |

This paper consists of $\mathbf{1 0}$ printed pages. Candidates are advised to check and to make sure all pages are printed.

1. You are provided with the following;

- a rectangular glass block
- 4 optical pins
- a soft board
- a plain paper

Proceed as follows:
(a) Place the glass block on the plain paper with one of the largest face upper most. Trace round the glass block using a pencil as shown below.

(b) Remove the glass block and construct a normal at B . Construct an incident ray AB of angle of incidence, $\mathrm{i}=20^{\circ}$.
(c) Replace the glass block and trace the ray ABCD using the optical pins.
(d) Remove the glass block and draw the path of the ray ABCD using a pencil. Measure length $L$ and record it in the table below.

| Angle $i^{0}$ | $\mathrm{~L}(\mathrm{~cm})$ | $\mathrm{L}^{2}\left(\mathrm{~cm}^{2}\right)$ | $\frac{1}{L^{2}}\left(\mathrm{~cm}^{-2}\right)$ | $\operatorname{Sin}^{2} i$ |
| :---: | :---: | :---: | :---: | :---: |
| 20 |  |  |  | 0.1170 |
| 30 |  |  |  | 0.2500 |
| 40 |  |  |  | 0.4132 |
| 50 |  |  |  | 0.5868 |
| 60 |  |  |  | 0.7500 |
| 70 |  |  |  | 0.8830 |

(6 marks)
(e) Repeat the procedure above for the angles of incidence given.
(f) Calculate the value of $\mathrm{L}^{2}$ and $\frac{1}{L^{2}}$; Record in the table.
(g) Plot a graph of $\frac{1}{L^{2}}$ (y-axis) against $\operatorname{Sin}^{2} i$.

G R A P H
(h) Calculate the gradient, S.
(3 marks)

Given that the equation of that graph is: : $\frac{1}{L^{2}}=-\left(\frac{1}{n^{2} b^{2}}\right) \cdot \operatorname{Sin}^{2} i+\frac{1}{b^{2}}$
(i) Determine the $\frac{1}{L^{2}}$ - intercept $C$ and the $\operatorname{Sin}^{2} i-$ intercept $B$.

$$
\begin{aligned}
& C= \\
& B= \\
&
\end{aligned}
$$

(1 mark)
(j) Calculate the value of $Q$ given by;

$$
Q=-\left(\frac{C}{s}\right) \div B
$$

(k) Hand in your constructions on the plain paper together with the answer script.
(2 marks)
2. I. You are provided with the following:

- A voltmeter
- An ammeter
- A dry cell
- A cell holder
- A switch
- 7 connecting wires ( 4 wires with crocodile clips at one end)
- A mounted resistance wire.
(a) Connect voltmeter across the dry cell on an open circuit. Measure its e.m.f.

$\mathrm{E}=$ $\qquad$ (1 mark)
(b) Now connect the apparatus provided as shown below.

Place the crocodile clip/jockey on the wire AB starting with $\mathrm{L}=20 \mathrm{~cm}$. Close the switch K. Record the terminal p.d. , V and corresponding current I.
Repeat for other values of $L$ shown and complete the table.

| Length L <br> $(\mathrm{cm})$ | Terminal p.d. <br> $\mathrm{V}(\mathrm{V})$ | Current <br> $\mathrm{I}(\mathrm{A})$ | $\frac{1}{R}=\frac{I}{V}\left(\Omega^{-1}\right)$ | $\frac{1}{V}\left(V^{-1}\right)$ |
| :---: | :---: | :---: | :---: | :---: |
| 20 |  |  |  |  |
| 30 |  |  |  |  |
| 40 |  |  |  |  |
| 50 |  |  |  |  |
| 60 |  |  |  |  |
| 70 |  |  |  |  |

(6 marks)
(c) Plot a graph of $\frac{1}{V}$ (y-axis) against $\frac{1}{R}$.
(4 marks)

G R A P H
(d) Given that the equation of graph is; $\frac{1}{V}=\frac{r}{E} \cdot \frac{1}{R}+\frac{1}{E}$

Determine from the graph:
(i) the intercept C on $\frac{1}{V}$ - axis

$$
\mathrm{C}=
$$

and hence calculate the e.m.f. E of the cell.
(1 mark)
(2 marks)
(ii) the slope $S$ of the graph.
(e) (i) Use the values of $C$ and $S$ above to find W, given by $w=\frac{S}{C}$
(1 mark)
(ii) What is the physical meaning of $W$.
(1 mark)
2. II. You are provided with the following;

- Half-metre rule
- Knife edge (raised)
- A thread (approx. 20 cm in form of a loop)
- 50 g mass
(a) Determine the c.o.g of the half-metre rule.
c.o.g. = $\qquad$ cm mark.
(b)

(i) Pivot the rule at 15 cm mark and balance it with the mass as shown. When it is well balanced, note and record the position of the 50 g mass;
(1 mark)
Position of 50 g mass $=$ $\qquad$ cm mark
(ii) Use your results to determine the weight of the rule.
(2 marks)
