## KAHURO/MURANG'A EAST JOINT EXAMINATION - 2016

## 233/3 <br> CHEMISTRY <br> PAPER 3 <br> (PRACTICAL) <br> JULY/AUGUST, 2016 <br> TIME: $\mathbf{2}^{1 ⁄ 1} 4$ HOURS

1. You are provided with:

- 2M hydrochloric acid solution X.
- Magnesium ribbon.
- 0.4 M sodium carbonate solution Y.
- Solid A (six pieces of 1 cm long magnesium ribbon).

You are required to determine:-
(i) The rate of reaction between hydrochloric acid and magnesium.
(ii) The mass of 1 cm of magnesium ribbon.

## PROCEDURE I

Using a measuring cylinder, measure $20 \mathrm{~cm}^{3}$ take 1 piece of 2 M hydrochloric acid, solution X and place it in a clean 100 ml beaker. Cut a 1 cm piece of magnesium ribbon and place it in the 100 ml beaker containing 2 M hydrochloric acid and immediately start the stop clock/watch; measure and record the time taken for the magnesium ribbon to react completely with-: 2 M hydrochloric acid in the table below. Retain the resultant solution by transferring it into a 100 ml measuring cylinder then adding distilled water to make 100 ml of solution, label this solution Z . Reserve solution Z for use in procedure II. Measure $18 \mathrm{~cm}^{3}$ of hydrochloric acid accurately, add $2 \mathrm{~cm}^{3}$ of distilled water to make the total volume $20 \mathrm{~cm}^{3}$. Transfer the contents into the 100 ml beaker,place another piece of 1 cm length magnesium ribbon in the beaker then swirl and record the time taken for it to completely react. Repeat this procedure by measuring the volumes of the acid and distilled water as in table I below.
Retain the remaining solution X for question 2 .
TABLE I

| Experiment | Volume of 2M <br> hydrochloric acid <br> $\left(\mathrm{cm}^{3}\right)$ | Volume of water <br> $\left(\mathrm{cm}^{3}\right)$ | Time taken for <br> magnesium ribbon to <br> react completely (sec) | $\frac{1}{\text { Time }}$ <br> $\left(\mathrm{sec}^{-1}\right)$ |
| :---: | :--- | :--- | :--- | :--- |
| 1 | 20 | 0 |  |  |
| 2 | 18 | 2 |  |  |
| 3 | 16 | 4 |  |  |
| 4 | 14 | 6 |  |  |
| 5 | 12 | 8 |  |  |

(a) Plot a graph of $\frac{1}{\text { Time }}$ against volume of the acid.
(6mks)
(3mks)
(b) From the graph determine the time taken for the ribbon to react completely with $17 \mathrm{~cm}^{3}$ of 2 M hydrochloric acid. (2mks)

## PROCEDURE II

Fill the burette with solution Y. Pipette $25 \mathrm{~cm}^{3}$ of solution Z into a conical flask.
Add 2 drops of methyl orange indicator. Titrate solution Z with solution Y to complete the titration table II below.
(4mks)
TABLE II

|  | I | II | III |
| :--- | :---: | :---: | :---: |
| Final burette reading |  |  |  |
| Initial burette reading |  |  |  |
| Volume of solution Y used. |  |  |  |

Calculate:
(i) Average volume of solution Y. (lmk)
(ii) Number of moles of solution Y used. (lmk)
(iii) Number of moles of hydrochloric acid in $25 \mathrm{~cm}^{3}$ of solution Z .
(iv) Number of moles of hydrochloric acid present in $100 \mathrm{~cm}^{3}$ of solution $Z$.
(v) Number of moles hydrochloric acid present in $20 \mathrm{~cm}^{3}$ solution X.
(vi) Number of moles of hydrochloric acid that reacted with 1 cm of magnesium ribbon.
(vii)Mass of magnesium present in 1 cm length of magnesium ribbon. ( $\mathrm{Mg}=24$ ).
2. You are provided with solid B. Use it to carry out the tests below. Write your observations and inferences in the spaces provided. Place all solid B in a boiling tube, add about $10 \mathrm{~cm}^{3}$ of distilled water and shake thoroughly. Filter the mixture obtained. Retain the residue for tests (b) below. Divide the filtrate into 2 portions.
(a) (i) To portion (i), insert a clean stirring rod and place it on a non-luminous flame of a Bunsen burner.

| Observation | Inference |
| :--- | :--- | :--- |
| $(1 \mathrm{mk})$ |  |

ii) To portion (ii), add about 3 drops of lead (II) nitrate solution, then warm.

| Observation |  | Inference |
| :---: | ---: | ---: |
| $(1 \mathrm{mk})$ |  | $(1 \mathrm{mk})$ |

(b) Dissolve the residue in about $8 \mathrm{~cm}^{3}$ of dilute nitric (V) acid solution and divide the resulting solution.

| Observation | Inference |  |
| :--- | :--- | :--- |
| $(1 \mathrm{mk})$ |  | $(1 \mathrm{mk})$ |

| (i) To portion (i), add sodium hydroxide solution, dropwise, then in excess. |  |  |
| :--- | :--- | :--- |
| Observation |  | Inference |
|  | $(1 \mathrm{mk})$ | $(1 \mathrm{mk})$ |
| (ii) $\quad$To portion (ii), add sodium chloride solution and then warm. <br> Observation |  |  |
| (1mk) | $(1 \mathrm{mk})$ | Inference |

3. You are provided with solid W. Place it in a boiling tube and about $10 \mathrm{~cm}^{3}$ of distilled water and shake. Divide the resulting solution into 3 portions.

| Observation |  | Inference |
| :--- | :--- | :--- |
| $(1 \mathrm{mk})$ |  | $(1 \mathrm{mk})$ |

(i) Use the first portion to determine the pH of the solution.

| Observation |  | Inference |  |
| :--- | :--- | :--- | :--- |
|  | $(1 \mathrm{mk})$ | $(1 \mathrm{mk})$ |  |

(ii) To the second portion, add about half spatula of sodium hydrogen carbonate.

|  |  |  |
| :--- | :--- | :--- |
| $(1 \mathrm{mk})$ | Observation | $(1 \mathrm{mk})$ |

(iii) To the third portion, add about 3 drops of acidified potassium manganate (VII).

| Observation | Inference |  |
| :--- | :--- | :--- |
| $(1 \mathrm{mk})$ | $(1 \mathrm{mk})$ |  |
