## GATUNDU SUB-COUNTY SECONDARY SCHOOL JOINT EXAMINATION

## INSTRUCTIONS TO CANDIDATE:-

(a) Write your name and index No. in the space provided.
(b) Answer all the questions in the spaces provided in the question paper.
(c) You are NOT allowed to start working with the apparatus for the first 15 minutes of the $2 \frac{1}{4}$ hours allowed for this paper. This time is to enable you to read the Question paper and make sure you have all the chemicals and apparatus that you may need.
(d) Mathematical tables and silent electronic calculators may be used.

FOR EXAMINER'S USE ONLY.

| Question | Maximum Score | Candidates Score |
| :---: | :---: | :--- |
| 1 | 21 |  |
| 2 | 12 |  |
| 3 | 7 |  |
|  | Total |  |
|  |  |  |

1. You are provided with:-

- Solution K
- A monobasic acid solution N .
- Sodium hydroxide solution B prepared by dissolving 8 g of sodium hydroxide in 1 litre of distilled water. You are required to determine:-
- The rate of reaction between solution N and solution K
- The molarity of the monobasic acid solution N .

## PROCEDURE 1

Using a measuring cylinder, measure $20 \mathrm{~cm}^{3}$ of solution $k$ into an empty $100 \mathrm{~cm}^{3}$ beaker.
Place it on a mark ' $X$ ' on a white plain paper.
Rinse the measuring cylinder and use it to measure another $20.0 \mathrm{~cm}^{3}$ of solution N .
Add solution N into solution K and start off the stop watch.
Then record the time taken for the mark ' $X$ ' to become invisible from above.
Repeat the procedure by measuring $17.5 \mathrm{~cm}^{3}$ of solution N and adding $2.5 \mathrm{~cm}^{3}$ of water and complete the table 1

## Table 1

| Experiment | 1 | 2 | 3 | 4 | 5 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Volume of solution K $\left(\mathrm{cm}^{3}\right)$ | 20 | 20 | 20 | 20 | 20 |
| Volume of solution $\mathrm{N}\left(\mathrm{cm}^{3}\right)$ | 20.0 | 17.5 | 15.0 | 12.5 | 10.0 |
| Volume of water $\left(\mathrm{cm}^{3}\right)$ | 0.0 | 2.5 | 5.0 | 7.5 | 10.0 |
| Time taken for x to become invisible(sec) |  |  |  |  |  |
| 1/time $\left(\mathrm{sec}^{-1}\right)$ |  |  |  |  |  |

(a) Draw a graph of reciprocal of time (1/t) against volume of solution N. (3 Mks)

(b) From the graph:
(i) Determine the time taken for the cross ' X ' to be invisible at $16.5 \mathrm{~cm}^{3}$ of solution N ( 2 mks )
(ii) Determine the rate of reaction when $16.5 \mathrm{~cm}^{3}$ of solution N is used. ( 1 Mk )

## PROCEDURE 11

Measure $50 \mathrm{~cm}^{3}$ of solution N into a 250 ml volumetric flask. Add more distilled water to make $25.0 \mathrm{~cm}^{3}$ of solution. Label this as solution J. Fill a burette with solution J. Using a pipette and pipette filler, place $25.0 \mathrm{~cm}^{3}$ of solution $B$ in to a 250 ml conical flask. Add two to three drops of phenolphthalein indicator. Titrate solution B against solution J until the pink colour disappears. Record your results in table 2 below. Repeat the titration two more times and complete the table.

Table 2.

|  | I | II | III |
| :--- | :---: | :---: | :---: |
| Final burette reading |  |  |  |
| Initial burette reading |  |  |  |
| Volume of solution J used $\left(\mathrm{cm}^{3}\right)$ |  |  |  |

(a) Determine the average volume of solution J used. (1 Mk)
(b) Determine the number of moles of;
(i) Sodium hydroxide in $25.0 \mathrm{~cm}^{3}$ of solution B. ( 1 Mk )
(ii) The monobasic acid solution J in the average titre. ( 1 Mk )
(iii) The monobasic acid solution $J$ in $250.0 \mathrm{~cm}^{3}$ of the solution. ( 1 Mk )
2. You are provided with solid D. Carry out the following tests and write your observations and inferences in the spaces provided.
(a) Place all of solid $D$ in a boiling tube. Add about $6.0 \mathrm{~cm}^{3}$ of distilled water and shake thoroughly. Filter the mixture into a test tube. Dry the residue using pieces of filter papers. Retain the residue for use in test 2 (b) below. Divide the filtrate into three portions
(i) $\quad \mathrm{To} 2 \mathrm{~cm}^{3}$ of the filtrate, add sodium hydroxide solution drop wise until in excess.

| Observations | Inferences |  |
| :--- | :--- | :--- |
|  |  |  |
|  | $(1 \mathrm{mk})$ |  |
| (1mk) |  |  |

(ii) $\mathrm{To} 2 \mathrm{~cm}^{3}$ of the filtrate, add one to two drops of sodium sulphate solution.

| Observations | Inferences |
| :--- | :--- |
|  |  |
|  | $(1 \mathrm{mk})$ |

(iii)To $2 \mathrm{~cm}^{3}$ of the filtrate, add aqueous ammonia drop wise until in excess.

|  |  |
| :--- | :--- |
|  |  |
|  |  |
| $(1 \mathrm{mk})$ | inferences |

(b) (i) Put a spatula end full of the residue obtained in (a) above in a test tube. Add about $6 \mathrm{~cm}^{3}$ of nitric (v) acid into the test tube. Retain the mixture for tests b (ii) and (iii) below.

| Observations | inferences |  |
| :--- | :--- | :--- |
|  |  |  |
|  | $(1 \mathrm{mk})$ |  |

(iii) To $2 \mathrm{~cm}^{3}$ of the mixture obtained in $\mathrm{b}(\mathrm{i})$ above, add aqueous sodium hydroxide drop wise until in excess.

Observations inferences
3. You are provided with solid E. Use it to carry out the tests below. Write your observations and inferences in the spaces provided.
(a) Place one third of solid E on a metallic spatula and burn it using a Bunsen burner.

Observations
Inferences
(b) Place the remaining solid E in a test-tube. Add about $6 \mathrm{~cm}^{3}$ of distilled water and shake the mixture. (i) $\mathrm{To} 2 \mathrm{~cm}^{3}$ of the mixture, add a spatula end full of solid sodium hydrogen carbonate.

(ii) To $2 \mathrm{~cm}^{3}$ of the mixture, add $2 \mathrm{~cm}^{3}$ of acidified potassium dichromate (vi) and warm.

| Observations | inferences |  |
| :--- | :--- | :--- |
|  |  |  |
| $(1 \mathrm{mk})$ |  |  |
|  |  | $(1 \mathrm{mk})$ |

(iii) To $2 \mathrm{~cm}^{3}$ of the mixture add two drops of acidified potassium manganate (vii) and shake well. Observations

|  | inferences |
| :--- | :--- |
| $(1 / 2 m \mathrm{mk})$ |  |
|  |  |
|  |  |
|  |  |
|  |  |
