1. The diagram below represent part of the set up used to prepare and collect gas T.

- (a) Name two reagents that reacted to produce both carbon (IV) oxide and carbon (II) oxide. (1mk)
- (b) Write an equation for the reaction which takes places the bottles. (1mk)
- (c) Give a reason why carbon (II) oxide is not easily detected. (1mk)

2. The set up below was used to presare hydrogen gas.

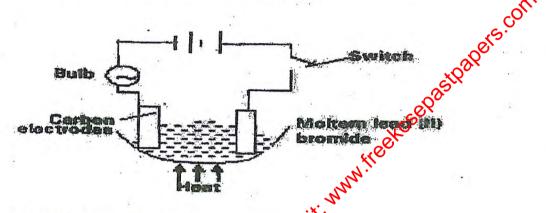

Complete the diagram to show how a <u>dry</u> sample of hydrogen gas can be collected. (3mkc)

3. When 31.2g of hydrated. Aluminium oxide ( $Al_2O_3XH_2O$ ) was heated to a constant mass of 20.6g of Aluminium oxide ( $Al_2O_3$ ) was obtained. Determine the value of x in hydrated oxide. (Al=27.0, O=16.0, H=1.0)

3MKS)

1.

4. Study the set up below and answer the questions that flows

(a)Label the cathode and anode on the diagram

(2mks)

(b) State and explain the observations that would be made at the electrodes when the circuit is completed

Statement

(3 mks)

Explanation

5.Carbon (II) oxide gas was ignited at the end of a gener		Flame K
Dry carbon(II)oxide		
(a) Write chemical equation for the reaction taking	place at flame K.	(1mk)
(a) write chemical equation for the reaction in-		40.745
(b) When trying to put off an oil fire, water is not used; l	nowever carbon (iv) oxide i	s used. Explain. (2mks)

7 (a) Define the term molar heat of formation?  (b) State the Hess's law as the state of the sta		
(c) Write the equation for the formation of (C <sub>4</sub> H <sub>10</sub> )	from its elements.	· · · · · · · · · · · · · · · · · · ·

8. Use the information given below to answer the questions that follow:- $\Delta H^{\Theta}_{c} \text{ (Graphite)} = -396 \text{Kjmol}^{-1}$ 

 $\Delta H_{c}^{\Theta}$  (hydrogen)

= -288Kjmol<sup>-1</sup>

 $\Delta H^{\Theta}_{c}$  (C<sub>4</sub>H<sub>10</sub>)

= -2877Kjmol<sup>-1</sup>

Using an energy level diagram, determine the heat of formation of butane (C<sub>4</sub>H<sub>10</sub>).

(2mks)

9. The table below shows the tests carried out on a sample of water and the results obtained.

I Addition of excess aqueous ammonia Colourless solution obtained

II Addition of excess aqueous ammonia Colourless solution obtained White precipitate

White precipitate White precipitate

a) Identify the anion present in the water

(1 mk)

b) Write an ionic equation for the reaction in III

(1 mk)

c) Write the formula of the complex ion formed in II

(1 mk)

10, Describe how a solid sample of the double salt, ammonium iron(II) sulphate, can be prepared using the following reagents; Aqueous ammonia, sulphuric(VI) acid and iron metal. (3 marks)

- 11.A solution of chlorine in Tetracloromethane turns colourless when propene gas is bubbled through it
  (a) Name the type of reaction that takes place
  (1 mk)
  - (b) Write an equation for the above reaction

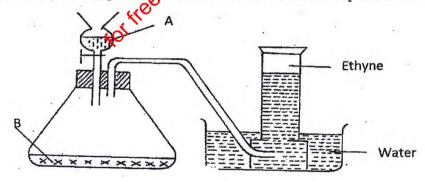

(1 mk)

12.. When excess dilute hydrochloric acid was added to sodium sulphite, 960cm<sup>3</sup> of sulphur (IV) Oxide gas was produced. Calculate the mass of sodium sulphite that was used.

(Molar mass of sodium sulphite = 126g and molar gas volume = 24,000cm<sup>3</sup>)

(3 mhs

13. Study the diagram below and use it to answer the questions that follow.

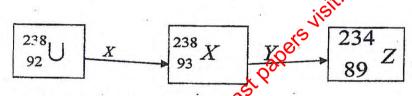

(a)Name the substances (2mks) B . (b) Write an equation for the reaction between A and B. (lmk) 14. (a) An organic compound P contains 64.9% carbon, 13.5% hydrogen and 21.6% oxygen. The relative formula mass of P is 74. Given that C=12.0, H=1.0, O=16.0 (i) Determine the empirical formula of P. (3 marks) (ii) Determine the molecular formula of P. (1 mk) 15. Distinguish between a strong and weak acid. Give an example of each (3 Marks) 16. When a metal oxide of element "W" reacts with hydrogen, the equation for the reaction is:  $WO_{3(s)} + 3H_{2(g)} \rightarrow W_{(s)} + 3H_2O_{(l)}$ (a) Compare the reactivity of element "W" with hydrogen gas. (1mk) 17. In the equation below, identify the reagent that acts as a base for forward reaction. Give a reason (2 marks)

$$H_2O_2_{(aq)} + H_2O_{(l)} = H_3O^+_{(aq)} + HO_2^-_{(aq)}$$

18. Calculate the relative formula mass of gas A given that the time taken for equal volumes of oxygen to diffuse through the same hole is 20 seconds and 24 seconds respectively (C=16.0) (2 marks)
